

Global RPM®

Powerful insights, accurate results and accelerated reviews

With the right people and processes, the right technology makes the review process faster, more accurate, and less expensive – three priorities of firms and corporations faced with complex litigation and internal or government investigations. We designed Global RPM with those priorities in mind. Fast and precise, our secure, web-based review platform provides powerful searching capability and customisable workflow features to make your review run smoothly and efficiently.

Capitalising on years of experience supporting the most complex, multi-national projects, Global RPM keeps pace with the increasingly multifaceted demands of global eDiscovery. We understand that every engagement poses its own challenges, and the platform must effortlessly scale from the basic to the complex, and everything in between.

With integrated technology from industry leader Content Analyst, Global RPM offers review teams must-have technology assisted review functionality such as:

- Near-duplication
- E-mail threading
- Concept search and clustering

These capabilities enable review managers to create efficiencies at the document, reviewer, and project levels. Managers can automate assignments, monitor review progress, track productivity and adjust workflow to meet critical production deadlines. Extensive reporting options provide a top-level perspective on each project – invaluable information that drives faster, more precise reviews and minimises the need for manual intervention.

Global RPM, coupled with our team of highly responsive, seasoned eDiscovery experts, gives our clients the dual benefits of superior technology and unparalleled service they need to meet their demanding review requirements.

No Problem too Complex.

Our team and our technology are engineered to solve problems.

Consilio supported a large and highly complex IP patent matter involving 2.5 Terabytes of data. In order to meet impending deadlines, the client elected to review the documents, using a geographically diverse network of attorneys.

The tight integration of Global RPM with our processing tool allowed for a seamless transition of the data into an easily reviewable dataset. The intuitive interface and workflow enabled reviewers to move rapidly through the process.

The project was completed quickly and accurately--on time and on budget.

Contact Consilio today. We're available when and where you need us most.

Global RPM®

Powerful insights, accurate results and accelerated reviews

Take charge of your review

Intuitive, dynamic visuals such as dashboards, timelines and enhanced statistics enable deeper insights into the progress of reviews, resource requirements and projected costs. Analytic features let your review managers quickly assess productivity, highlight potential trouble spots and monitor consistency, resulting in accelerated review cycles, improved quality and lower costs.

Handle complex, multi-lingual projects with ease

From its earliest iterations over six years ago, Global RPM was built specifically to handle the challenges of non-English data. The technology allows teams to search and review documents in multiple languages, including Chinese, Japanese, and Korean, and right-to-left languages such as Hebrew and Arabic – all within a single platform.

Faster, more accurate audio reviews

We have integrated Nexidia's patented phonetic indexing and search technology into Global RPM, providing a one-stop solution for audio collection, processing, search, review and production. This streamlined solution delivers dramatic improvements in accuracy and cost reduction.

 Global RPM greatly expands our ability to solve the most frustrating challenges faced by our clients; streamlining the review process and lowering total costs.
