www.consilio.com

Consilio has a global review center footprint that provides clients with the management expertise, quality assurance protocols and review teams that deliver high-quality, defensible results. We have managed hundreds of reviews, developing the expertise required to support any review—whether your case is small and regional or you’re handling a complex, cross-border, multilingual matter.

GLOBAL LOCATIONS

Our clients’ matters cut across jurisdictions with different data privacy and protection regulations. In most instances, the safest and often only way to conduct a review is in the region where the data originated. Additionally, matters can come with budgetary pressures which drive reviews to lower-cost markets. That’s why Consilio has a network of review centers stationed strategically across the globe—from New York to London to Frankfurt to Shanghai, and places in between.

ON-DEMAND REVIEW CENTERS

In addition to our current locations, Consilio has the resources to build out a temporary review center anywhere in the world. Our on-demand review centers are held to strict security protocols, and our multilingual team of global experts can quickly secure the human and technological resources required to meet your timelines.

All Consilio review centers meet rigorous industry and statutory data-security requirements while providing an atmosphere conducive to reviewer efficiency and accuracy.

On-Demand Review Centers: Case Examples

Vienna

Consilio was able to set up a review in Vienna to meet client requirements in two weeks. Requirements included finding 20 reviewers with document review experience and an active bar admission in Germany who were willing to relocate to Vienna for at least six months. The review finished on time, with nothing but praise from the two sets of outside counsel with whom we worked.

Belgrade

A Consilio client requested we conduct a review in a location where we lacked a review center: Serbia. Our team sent our project manager—who happened to be a native speaker—to help set up and then manage the review. Within just over a week we were able to secure the location, technology and 20 Serbian attorneys to start the review which successfully concluded within five months.

Building and Network Security

All Consilio review centers are protected against unauthorized physical access by utilizing either biometric scanners or card key access control. Video surveillance further helps secure the location. The review centers are serviced by thin-client workstations providing centralized control over each reviewer's work space. The physical office space is flexible and configurable, allowing complete segregation of concurrent reviews, further protecting privacy.

On-site Review Managers

Consilio's experienced review managers are physically situated on site with the review team, ensuring a constant connection to the ongoing operation. This co-location promotes communication, quality oversight and productivity management.

Convenient Access

Most Consilio review centers are in the business hub of financial centers where major law firms have their global offices or are close to local airports. These accessible locations afford attorneys and clients the option to personally meet with review teams frequently and conveniently.

Efficiency & Value

All Consilio review centers are fully furnished offices supported by on-site technical staff. Reviewers stay focused with comfortable workstations optimized for conducting document review, ergonomic seating, bright lighting and air conditioning; they stay recharged with beverages, snacks and access to kitchen amenities.
