

ENHANCED AUDIO REVIEW EXPERIENCE

Overcome audio discovery challenges with a complete solution to process, search, review, and produce

Today, more than ever, financial institutions create and preserve massive amounts of audio data from trade floor recordings, stored voicemails, and other sources.

This audio data is discoverable in litigation and regulatory investigations, creating significant challenges for corporations and their external counsel due to the sheer size of audio files and to the proprietary formats in which that audio is generated and stored. These challenges complicate discovery workflows, adding substantial cost and delay.

To meet these challenges, Consilio built the Enhanced Audio Review experience based on years of supporting some of the largest global financial and banking institutions and their external counsel.

Accelerates reviews and lowers costs without sacrificing accuracy and quality

Simplifies the complexity common in audio reviews from beginning to end

Provides unmatched expertise in managing global, multilingual audio matters

ACCELERATE REVIEWS AND LOWER COSTS

Our market-leading technology and capabilities save money and optimise the review from start to finish.

Specifically, clients can:

- **Increase reviewer efficiency.**

With our enhanced online streaming audio player, reviewers see the visual waveform representation of the audio file, allowing them to jump directly to the sections where speech can be found. Additionally, reviewers can speed up the playback and skip forward 10 seconds in one click during slow portions.

- **Avoid the review of silent sections of audio.**

Improve reviewer productivity with our innovative audio trimming technology that removes non-talk segments of the collected recording.

- **Optimise workflows.**

Dramatically cut the cost of review through phonetic searching and review of potentially relevant audio files based on the presence of phonetic search hits.

SIMPLIFY THE PRACTICE OF AUDIO DISCOVERY

Consilio's innovative review platform offers unparalleled solutions to the complex problems posed by audio discovery. Our solution aligns with our clients' needs by providing:

- **Unified discovery platform.** Full integration of Nexidia's phonetic search technology into our review platform, Global RPM® streamlines the eDiscovery workflow for both audio and non-audio content. Clients only have one hosted database with one set of user logins, one set of assignments, one tag pallet, one security protocol, and one search engine. No other provider in the market has integrated with Nexidia as deeply as Consilio.
- **Ability to handle proprietary codecs.** Consilio can process more than 40 varieties of audio files, including numerous proprietary codecs.
- **Scalable technology.** Our solution scales horizontally to avoid network bandwidth bottlenecks, application latency, and storage limitations that our clients tell us are common when doing large scale audio reviews in other platforms.

RELY ON DECISIVE CONSULTING WITH UNMATCHED GLOBAL EXPERTISE

Consilio offers a truly global solution. We maintain enterprise-class data centers in all of the world's key financial markets, and we understand the data privacy challenges and cross-jurisdictional complexities of global reviews. Our expertise includes:

- **Experienced project managers.** Our certified team is an extension of your team and is highly experienced in supporting audio review workflows. Project managers consult clients on how best to approach audio reviews and get the best results from technology, in addition to making sure reviews stay on track.
- **Global reach, fast response.** Our Enhanced Audio Review solution is pre-integrated and fully deployed into our data centers, which have already passed the most stringent security audits of the largest global banks. As a result, we can respond quickly to the eDiscovery needs of financial institutions around the world.

One of the largest global banks

turned to Consilio when it needed an eDiscovery provider capable of managing an audio review project with a 33-terabyte corpus that contained significant portions of non-talk segments within Speakerbus audio files. This client required a provider that could increase reviewer efficiency, support a 300-person concurrent review team, and expedite the project.

With our innovative technology, we identified and trimmed 18 aggregate years of empty non-talk time from the collection. We also developed numerous enhancements, including the ability to download trimmed audio files and speed up playback to improve reviewer efficiency.
