

Sightline for eDiscovery

Support your entire eDiscovery workflow in an intuitive platform designed for efficiency and trusted to perform.

- ✓ Flexibility to work the way you want
- ✓ Optimize reviews for coding efficiency and accuracy
- ✓ Get quick insights and reports on review progress

eDiscovery is complex and difficult with increasing volumes of data, costly review teams and inconsistent vendor support. Technology should be designed to reduce the burden - not add to it. We built Sightline with a different perspective: one that fully understands our clients' challenges and creates an innovative experience free from compromise. The end result? Case teams can understand their documents sooner, cull more, prioritize better and review faster with lower cost.

CONDUCT SMARTER REVIEWS. JUST IN TIME.

Software should make the case team smarter and more informed. Sightline uses analytics to inform the case team when other documents should be kept in the same assignment batches, and defines the optimized sort order of documents in order to promote coding speed, coding quality and minimize QC cleanup headaches.

Smarter Search Results

Search results in Sightline are designed with efficiency in mind. Informing the case team of documents related to pure search hits that can be reviewed together to optimize coding speed and coding quality.

Action Similar Documents

At the moment of actioning a set of documents, Sightline recommends related documents (family members, e-mail threaded docs & textual near duplicates) to include so case teams are better informed and more efficient.

Optimized Review Order with SMARTASSIGN™

With SMARTASSIGN™, records and their children are reviewed together along with their textual near dupes so documents can be reviewed in context – reducing review cost without compromising comprehension.

DEMYSTIFY YOUR REVIEW

For review managers, knowing a review's progress, activity levels and outcomes should not be mysteries to solve for. Sightline is different from other eDiscovery software platforms. It makes everything about your review transparent with customizable and shareable reports – without the need for service calls. Case teams no longer stay in the dark when it comes to knowing the progress of their review.

7 Different Standard Review Progress

Compare reviewer time on task and productivity to others

Save and share your customized reports with others on the case team

Automatically schedule your reports to run and distribute in the future

Audit the activity of any user or any document

ACHIEVE CODING SPEED AND CODING QUALITY

It's human nature; the faster you go, the more prone to mistakes you are. Sightline defies nature with tools designed to structure and execute reviews for efficiency, increase coding speed and reduce reviewer fatigue. The end result? Faster coding speeds without sacrificing coding quality.

OPTIMIZED DOCUMENT SORTING

Review Managers define the Optimized Sort of documents so that reviewers spend less time bouncing between unrelated docs.

PROGRESSIVE CODING FORMS

Coding forms present decisions in a progressive, logical flow, instead of everything-at-once – reducing comprehension time of unnecessary coding decisions.

CODING STAMPS AND CODE SAME AS LAST

Reviewers reach a higher "cruising altitude" with personalized one-click tools to reduce fatigue-inducing repetitive coding actions.

CODESYNC SIMILAR DOCUMENTS

Reviewers can code entire families, email threads or textual near dupe groups as a unit, so consistent coding is applied to all selected documents instantaneously.

The Power of ONE

FROM THE NATIONAL LAW JOURNAL

Consilio and Advanced Discovery have joined forces to become one of the largest global providers of eDiscovery, document review, risk management and legal consulting services. As one company, we offer our clients the industry's most capable and consultative services delivery team with the industry's most innovative technologies on a global scale – delivering success on our clients' toughest challenges.
