

# Analytics in Sightline

Leverage the power of analytics to achieve higher quality and lower costs in a fully supported experience

- Incorporate analytics into your workflow in Sightline immediately, without processing delays or added costs
- Visualize and action documents by conceptual relationships or communication patterns
- Conduct smarter reviews, intuitively organizing assignments to promote coding speed and quality
- Email threading, textual near dupe and conceptual analytics included in every standard license

Analytics  
\$0  
Included

Without effective tools to analyze increasing volumes of data created by modern communications, case teams are facing an uphill battle with limited time and resources. Sightline deeply integrates analytics-driven tools into the everyday user experience so users can finally begin to realize significant efficiency and quality benefits in their workflows.

## Built In, Not Added On

We include email threading, textual near dupe and conceptual analytics in every standard Sightline license. Every document that is ingested into Sightline is fully analyzed. The end result: every aspect of the culling, prioritization, review, QC and production experience leverages analytics to help clients solve their early case, investigatory and review challenges...without compromises.

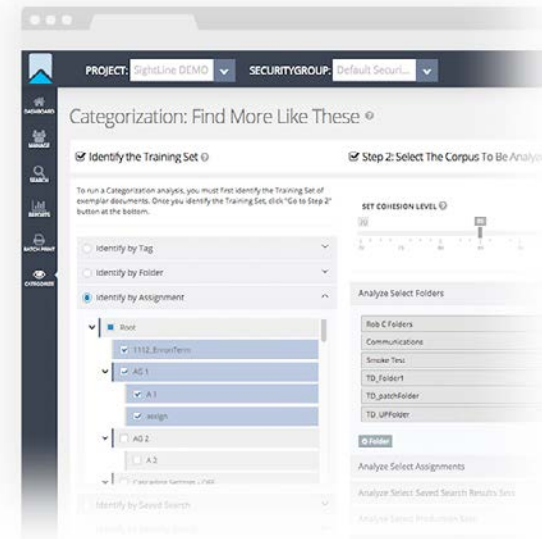

## Leverage the Work Product You Know

KEY DOCUMENTS ▶ CATEGORIZATION ▶ ACTION

Kicking off an investigation, case teams often don't know what they don't know. Sightline is designed to provide quick insights into a document set's composition so teams can structure their next steps quickly. Using key documents as a starting point, Sightline's Categorization: Find More Like These finds related documents quickly and effortlessly.

## Understand and Act on Documents By Concept

Sightline allows case teams to analyze large volumes of documents by conceptual relevance. Because documents are preprocessed, this analysis occurs quickly without the wait times typical of other analytics software. Conceptually-related documents are then available to refine with additional keyword searches, identify hot documents of interest or prioritize the review.

**1. Select & Filter Documents to Analyze**

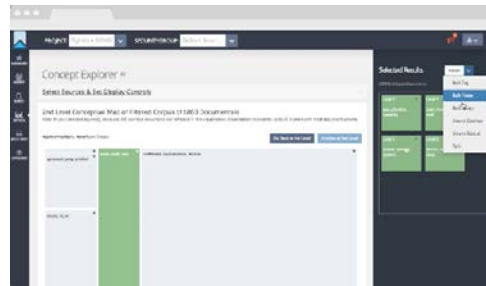

Run cluster analysis on any selected sub-population of documents – identified in a search result set or a folder.

**2. Zoom Into Selected Clusters**

Drill into clusters to look at sub-clusters or overlay heat maps to see where documents of interest live within the visualization

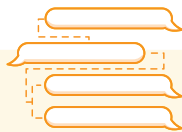

**3. Select Clusters of Documents & Act**

Select multiple clusters of interest into the selection cart and take action – tag them, folder them, assign them for review

**Analytics Superpowers *Not* Included**

Analytics tools can be activated in the document review experience, providing reviewers with ability to review and code more efficiently.

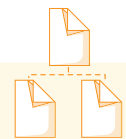

**Thread Map**

**Family Members**

**Near Dupe**

**Conceptually Similar**
