Consilio has worked with over 100 different pharmaceutical and biomedical corporations over the past five years, handling nearly 700 industry-specific engagements, including forensic collection, discovery consulting, legal department consulting, and over 350 eDiscovery and document engagements.

Through our immense experience working with these clients over the past 10+ years, we've gained a unique understanding of their needs and the subject matters and issues that they face in high stakes litigation and government investigations.

Case Study: Large Opioid Matter Response

Through our recent experience working with a number of large pharmaceutical manufacturers and distributors in connection with a large MDL class action involving allegations that the defendants played a significant role in opioid overdose and abuse, we learned that corporations in these industries can never be too prepared to handle the volume of electronically stored information relevant and necessary to vigorously defend their positions. Proprietary data sources, global repositories and information systems, complex PII considerations, and extensive records retention policies and practices underscored the importance of a strategic, organized and proactive approach to forensic data collection, processing, review and production.

Strategic Approach & Execution

Consilio helped to preserve and collect over 12 terabytes of data using remote and on-site collection tools deployed around the US. Using advanced analytics techniques, we were able to strategically process and cull only the information that was confirmed to be relevant and necessary, resulting in a refined document population for review. Through the thoughtful and iterative evaluation of custodians and data sources, we **saved our client almost \$1M in processing and review fees** and ultimately leveraged a team of 20 contract attorneys with scientific backgrounds to efficiently review a population of ~250k documents under a fixed cost pricing model. The review team's subject-matter expertise and experience empowered them to develop creative workflows for handling PII and non-responsive product redactions further resulting in significant cost-savings for our client. **Our project teams coordinated with multiple co-counsel firms to meet aggressive production schedules, resulting in the delivery of almost 100 distinct productions with several concurrent deliveries per week.**

Effective Preparedness

- Litigation Readiness Through Data Maps & Effective Records Retention Policies:** Take the time to know where your data resides (both in terms of information systems and geographically) and identify sources of duplicative information and/or information that can be defensibly discarded;
- Preserve Broadly, Process Iteratively and Strategically:** The scope of potentially relevant information is typically overbroad, and while it is important to preserve that data, significant cost-savings can result from effectively using analytics to hone and strategically process only the information defensibly confirmed to be necessary
- Complex Redaction Considerations:** Leverage native redaction workflows and experienced review teams to approach complex PII and non-responsive product redactions in the most efficient and cost-effective manner.
