Mobile data is one of the fastest growing sources of discoverable electronically stored information. Yet, eDiscovery still depends on manual workflows - reviewing data collected from mobile devices outside of standard review platforms. Mobile data (SMS, IM, third-party chats, linked photos, videos, voice-mails, etc.) is typically extracted in one bulk, comma-delimited report or Excel file. Communications become rows and columns on a spreadsheet, creating an inefficient, time consuming and disconnected review process.

Defensibly Review Mobile Device Data with Complete Connector

Consilio's end-to-end solution is designed to automate and integrate the review of mobile data to a format that can be easily understood, searched, analyzed, and reviewed. Consilio Complete Connector delivers:

- *Proven Mobile, Chat & Messaging Data Expertise –* From Skype to Bloomberg Chat, Consilio experts have worked with law firm and corporate clients on hundreds of matters involving mobile, chat & messaging data.

- *Convert mobile device collections into a format into a user-friendly experience that can be easily understood, searched, analyzed, and reviewed.*

- *Thread conversations together and view them as displayed on the native device* and avoiding the confusion of reviewing messages out of context from their conversations.

- *Multi-media content (photos, videos, and voicemails) are linked in-line with timestamps* so you can better understand conversation flow.

- *Compatibility with all major review platforms, including Relativity*® *–* Also includes support for analytics tools, such as conceptual clustering and search, to reduce population and prioritize reviews.

- *Multilingual & Global Support* – Mobile chat, messaging technologies and workflows can be adapted to any language including Chinese, Japanese, and Korean. Certified & audited global infrastructure conforms data privacy & security regulations.

Conversation threads are viewable in the same look and feel of native apps on the mobile devices.

In-line images, videos and voicemails can be seen and reviewed within the conversation threads.

Deleted messages that are recovered can be easily identified.
