Consilio complete ai

Comprehensive legal AI & analytics solutions to uncover relevant data, reduce costs, and improve work product quality.

◄ Empower your team from a suite of AI solutions, ranging from established machine learning workflows to innovative generative technologies

◄ Further streamline legal workflows and control costs with a full- or self-service deployment AI to meet your adoption goals

◄ Unlock the full potential of AI with comprehensive onboarding, training, knowledge sharing, and solution support

GenAI and Machine Learning from the Trusted Leader in eDiscovery

Today, organizations face escalating risks and costs from surging data volumes and complexity to the ever-tightening litigation, data privacy and regulatory environment. Traditional means of relying on human capital, conventional technologies, and basic legal workflows are increasingly insufficient.

Building on a decade of expertise in advanced legal machine learning expertise, Consilio Complete AI offers clients customizable AI-enhanced solutions designed to navigate the complexities of investigations, discovery, and compliance workflows while increasing efficiency and controlling costs.

Meet the Complete AI suite

From large volumes of internal investigations to multi-party class action matters, Consilio delivers defensible applied AI-enhanced outcomes to matters of all sizes for clients worldwide.

generative

Investigate, summarize, and review with confidence - Evolve legal document handling and risk assessment and optimize key phases of the legal process.

Investigate
Enhanced Risk Detection
Deepen your insight into legal risks, exposure, and pivotal individuals during the investigation phase and delve into intricate case details through a series of intuitive, natural language inquiries and responses, streamlining the discovery process and sharpening your strategic focus.

Summarize
Swift Document Analysis
Rapidly scan and intelligently summarize documents, allowing you to pinpoint crucial information without the need for exhaustive review. Navigate through extensive data sets with ease and identify key documents swiftly, enhancing your decision-making efficiency.

Review
Streamlined Document Review
Cost-effectively review extensive document volumes across multiple issue codes. Attorneys gain precise insights into the rationale behind each document's classification as responsive or non-responsive, bolstering confidence in the review's thoroughness and accuracy.

priv review

Identify privilege faster — Streamline privilege detection, enhancing cost-efficiency and mitigating risk in privilege review through precise AI technology and expert-driven, defensible workflows. Elevate the security of sensitive documents with improved AI scoring, speed up review by identifying likely privileged documents for prompt and precise decisions.

sensitive data detect

Identify and redact sensitive data faster — With increasing cyber threats and stringent data privacy regulations, Sensitive Data offers an AI-powered identification, redaction, and encryption of PII across a multitude of data sources — streamlining compliance and significantly reducing the risk and costs associated with inadvertent data exposure.

Attorneys on Complete Intelligence Team

prioritize

Focus on what matters first - Optimize the review process by strategically sequencing documents according to their relevance, guaranteeing that vital information is identified promptly. This approach prioritizes the examination of the most pertinent documents, ensuring that key data is surfaced at the earliest stages of review.

assess

Early insights on risk and cost - Streamline the initial phase of legal proceedings by enabling teams to gauge their case's merits, forecast costs, and strategize effectively, all through an initial analysis of available digital data.

conceptualize

Uncover understanding from data - Enhance eDiscovery by analyzing and grouping documents based on the underlying ideas they present, rather than solely on keywords. This method provides a more profound understanding, revealing patterns and themes that conventional searches might overlook.

predictive coding

Make coding decisions faster - Leverage algorithms to determine document relevance in a case, using a sample of reviewed documents to guide the assessment. Choose from TAR 1.0 and TAR 2.0 workflows guided by legal experts experienced in applied machine learning techniques.

AI with Integrity - Consilio Responsible Approach to Legal AI

Consilio, together with our clients and the broader legal community, is working continually to develop responsible AI-enhanced solutions built on a foundation of responsibility, trust, and safety. Our core principles include:

Mitigating Bias & Ensuring Fairness
Consilio is committed to reducing bias in AI by using diverse, representative datasets and employing fairness metrics and bias mitigation techniques during model training and validation.

Prioritizing Data Privacy & Security
Implementing stringent data privacy measures and robust security protocols, Consilio ensures that sensitive information is protected, adhering to the highest standards of data governance and compliance.

Enhancing Output Quality & Reliability
By continuously monitoring and fine-tuning AI models, Consilio ensures the outputs are of high quality, accurate, and reliable, especially in critical applications like legal analysis.

Improving Model Understanding & Interpretability
Consilio is dedicated to making AI decisions more transparent and understandable, employing techniques that elucidate model reasoning processes and providing clear explanations to users.

Optimizing Resource Efficiency
By leveraging efficient model architectures and optimizing computational resources, Consilio aims to reduce the environmental and financial costs associated with training and deploying AI models.

Addressing Content Attribution & Intellectual Property
Consilio is at the forefront of navigating the legal and ethical implications of AI-generated content, ensuring proper attribution and respect for intellectual property rights.

Navigating Regulatory & Ethical Landscape
Keeping abreast of evolving regulations and ethical guidelines, Consilio ensures that its AI solutions are not only compliant but also align with the highest standards of ethical practice.

Ensuring Quality & Diversity of Training Data
Consilio invests in curating extensive, high-quality, and diverse datasets to train its models, ensuring robust performance across a wide range of scenarios and applications.

Balancing AI Integration with Skill Enhancement
Consilio champions a balanced approach that integrates AI tools while also emphasizing the importance of human expertise, ensuring that technology complements rather than replaces valuable professional skills.

Fortifying Model Robustness & Preventing Adversarial Attacks
Consilio is proactive in fortifying its AI models against adversarial attacks, implementing rigorous testing and enhancing model robustness to maintain the integrity and reliability of its AI solutions.

Through these measures, Consilio is not just addressing the inherent challenges of generative AI but is also setting industry standards for responsible, ethical, and effective AI deployment.
