Optimize Privilege Review: Unlock Accurate Efficiency

In today's legal and corporate landscapes, the efficient review of privileged documents is a critical challenge, often leading to significant expenditure and resource allocation. Firms are constantly seeking ways to optimize the review process while maintaining the integrity and confidentiality of sensitive information.

Consilio addresses this pressing issue with Complete AI Priv Review—a robust, AI-powered solution that transforms the privilege review process. By integrating cutting-edge technology, advanced workflow methodologies, and analytics expertise, this solution offers a streamlined, cost-effective approach to identifying, protecting, and managing privileged documents throughout the review stages.

Advantages of Complete AI Priv Review

- Client Consistency** – Automate tiered term sets across client matters, ensuring consistent document coding and storing client-specific lists in Relativity. This boosts knowledge sharing and coding uniformity across various cases.
- Matter Consistency** – Pre 1LR Coding targets key privilege terms specific to each matter, enhancing the accuracy and consistency of document review relevant to the case at hand.
- User Friendly** – An intuitive Relativity dashboard simplifies quality control, allowing users to manage and oversee the review process effectively and with greater ease.
- Traditional Analytics** – Structured analytics and duplicate analysis support consistent quality checks, streamlining the review process by identifying similar documents and coding patterns.
- Technology Assisted Review** – Privilege modeling uses AI to improve QC, identifying privileged documents more accurately and reducing the need for exhaustive manual reviews.
